Please note that not all share classes mentioned above might be available in your country of residence.

The published prospectuses or Information for investors pursuant Sec 21 AIFMG respectively as well as key investor information for the investment funds of Raiffeisen Kapitalanlage-Gesellschaft m.b.H. are available at www.rcm.at in German and – where units are sold outside of Austria – also at www.rcm-international.com in English (or German) or in your national language.

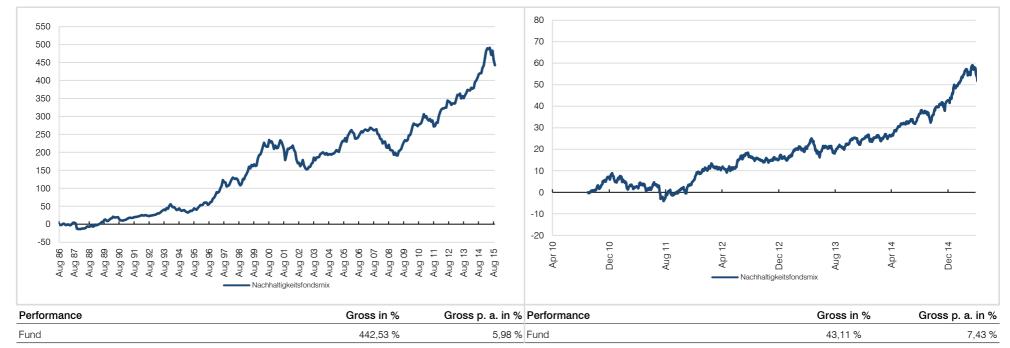

We have compiled the following information for you as an investor who has extensive experience and knowledge in the securities field. If you have any questions please do not hesitate to contact us.

Performance

Performance since Inception (25. August 1986 to 30. September 2015 in Percent)

5-Year Performance (30. September 2010 to 30. September 2015 in Percent)

Fund Volume in Mio. in EUR 193,6

Please note that the offset logic is d-1.

The performance is calculated by Raiffeisen KAG in accordance with the method developed by the OeKB (Österreichische Kontrollbank AG) on the basis of data provided by the custodian bank (in the event that the payment of the redemption price is suspended, using an indicative price). Past performance results do not permit any reliable inferences as to the future performance of an investment fund.

Regarding our clients whose home currency differs from the fund currency, we would like to point out that the yield may rise or fall also due to currency fluctuations.

Individual costs, namely the subscription fees (up to 3 % of the invested amount) and redemption fees (up to 0 % of the sold amount), have not been included in the performance calculation. Where these costs are included this will result in a lower performance figure according to the amount of the subscription and redemption fees.

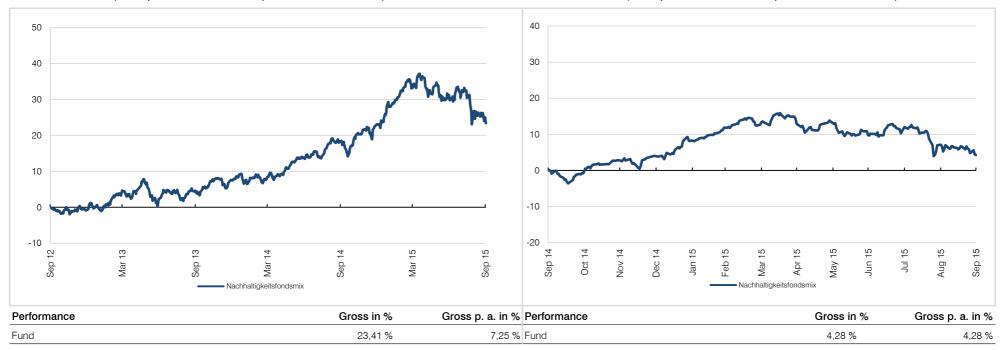

As a part of the investment strategy, it is possible to invest to a significant degree (with regard to the related risk) in derivatives.

Performance

3-Year Performance (30. September 2012 to 30. September 2015 in Percent)

1-Year Performance (30. September 2014 to 30. September 2015 in Percent)

Commentary

September was marked by a volatile sideways movement on the international equity markets. The US Fed's decision to leave the key rate unchanged caused uncertainty about the condition of the global economy. The VW scandal involving manipulation of exhaust testing also generated pressure. The effect of these uncertainties was also seen on the bond markets. While investors rushed into relatively risk-free government bonds, the opposite effect was seen in corporate bonds, and due to the poor risk sentiment on the market sharp increases in yield premiums were seen for higher rated instruments as well.

The fund's fundamentally broad diversification was maintained. Investment continues to be focused on bonds and equities of responsible, sustainable companies and governments. The ratio of equities in the fund is currently at roughly 48 %. (24.09.2015)

Security Structure by average rating

Duration: (also: Macaulay duration)

A common measure for the average capital commitment period for fixed income bonds. Duration serves as a rough measurement of the interest rate sensitivity of a bond. For bonds without fixed coupons and/or fixed remaining maturity (e.g. floating rate bonds, callable bonds, etc.), Macaulay duration is sometimes not applicable or only applicable to a limited degree. Related and derived concepts include modified duration, effective duration and spread duration.

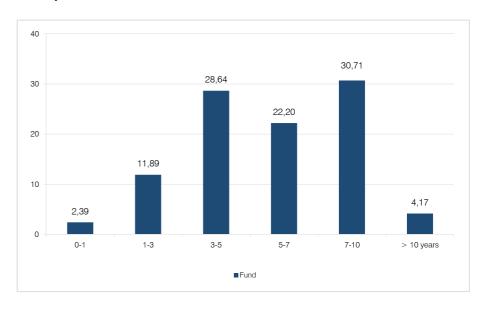

Modified Duration:

Modified duration is the elasticity of the bond price to a small change in the yield on the bond. It is derived as the quotient from the Macaulay duration and (1+ yield of the bond). For bonds without fixed coupons and/or fixed remaining maturity (e.g. floating rate bonds, callable bonds, etc.), modified duration is sometimes not applicable or only applicable to a limited degree.

Coupon:

Coupon either refers to the regular payments of interest to the bondholder ("coupon payments") or the interest rate which determines the amount of the coupon payment as a percentage rate of the nominal value of the bond ("coupon interest rate"). The coupon interest rate is different than the yield on the bond. Depending on the whether the bond is outfitted with a fixed or a variable coupon interest rate over its term, bonds are referred to as "fixed-rate" or "floating-rate" bonds.

Explanatory notes

Valuation Guidelines

The fund value (calculated value per investment unit) is determined by the depository bank each trading day and is published by the Oesterreichische Kontrollbank. This value includes all fund assets less commissions and fees.

Fund valuation is performed using the closing asset prices for the previous day (with the exception of Advisory Mandate). The data source used is Österreichische Wertpapierdaten Service GmbH (ÖWS). If no closing price is available from ÖWS, other information systems (Reuters, Bloomberg) are used for data. Listed security prices are not binding prices which are relevant for trading.

Performance measurement for the fund is based on the officially calculated values, in accordance with the OeKB method. Calculations are performed under the assumption that dividends are reinvested in the same fund. A total return index is developed from the daily calculated values and dividends (fund splits are taken into consideration). The performance is the percentage change calculated from the index over a defined time period and corresponds to a "time-weighted return" (return per amount invested).

For performance comparison with a market, for targeted fund the market value for the previous day is used, as the closing market price of the previous day can be used for fund valuation; for funds of funds, the market values from two days earlier are used analogously. The data sources for the markets are Datastream, Bloomberg and OeKB.

Subsequent value adjustments and deviations compared to earlier reports cannot be ruled out.

The risk indicators for funds and markets are calculated after a period of 36 weeks from fund or market launch, as at least 36 robust values are needed for statistical calculations.

The calculations are based on weekly returns since fund launch as long as at least 36 data points are available or based on monthly returns for the last 36 months after a period of three years (greater information content).

Important Note

All of the data and information are compiled and reviewed with the utmost care. Contents are updated regularly and reflect the state of information as at the time of update. No liability or guaranty can be assumed for the information provided being up-to-date, correct or complete. We deem the sources which are used to be reliable.

The software employed calculates to fifteen decimal places and not with the two decimal places which are shown. Deviations can occur due to further calculations with the reported results. For Advisory Mandates the information and calculations in the report are based on the data in the shadow bookkeeping in Raiffeisen Bank International AG. As this shadow bookkeeping is based on information provided by the depository bank, there may be deviations.

Performance is calculated by Raiffeisen KAG pursuant to the OeKB method, based on the data from the depository bank (in the event that payment of the redemption price is suspended, available indicative values are used).

Subscription and redemption fees are not taken into consideration. Past performance is not a reliable indicator of the future development of an investment fund.

Regarding our clients whose home currency differs from the fund currency, we would like to point out that the yield may rise or fall also due to currency fluctuations.

This document is neither an offer, nor a recommendation to buy or sell, nor an investment analysis. It is not intended for use in lieu of individual investment advice or other consultation. It is expressly noted that securities transactions can involve significant risks and that taxation of such depends on personal circumstances and is subject to change in the future.

Explanatory Bonds Ratios

If security are given early call rights by the issuer, the term depicted for the securities in the fund is up to the early call date (to next call). If, contrary to standard market practice, the issuer decides to suspend early call rights, the result is a corresponding extension of the fund's term structure. The regular redemtion dates of the bonds (to maturity) can be found in the annual reports and semi-annual reports (in the description of securities in the fund portfolio).
